*Please Note: Coverage figures for dense pack applications are based upon recommended installed densities from a Danish Building and Research study to prevent settling. Coverage figures for loose fill applications are based upon testing data from R&D Services for R-13, R-19, R-22, R-30, R-38, R-49 and R-60. Information for other R-Values have been extrapolated from this data. Coverage per bag does not take in account framing. R-Value decreases slightly as insulation density inscreases.*
